

DMX Interface

Now you can control our Dimmers and effects devices with DMX! The unit has standard 5 pin XLR DMX input and loop connections and 6 independent Interface outputs. The 6 Interface outputs are sequential from the DMX address setting, i.e. (001) from 001 to 006, (507) from 507 to 512, etc. Has DMX receive, power, and 6 output activity indicators. \$425

Auto Power Disconnect

Expensive electronic equipment needs more than surge suppressors and circuit breakers to insure against power line damage. When power fails, especially over a wide geographic area, there is often a dangerous surge when power is restored. This surge can exceed the limits of the common surge suppressor. Auto Power DISCONNECTS the equipment upon power failure, isolating the equipment from the power source until the reset button is pressed. Has line and load power indicators, 20 amp fuse. \$325

Superbrite Flashlight Insert

The only "practical" way to create those beautiful flashlight beams in atmospheric diffusion without using a big brute of a flashlight or wired actor. Use this battery shaped insert with any 2 "D" size flashlight with flange base bulb (included). As bright as a 6"D" size krypton flashlight. Over 6,000 footcandles! Uses 2x9 volt cells and is the same size as 2 "D" cells. \$125

FiveLine Telephone Gag

Works with classic 5 line office phones allowing you to light any of the 5 lines on cue, lock them on, or use the automatic mode which sequences the lamps to simulate a busy office! Each of the lines has an indicator LED. \$585

FlickerTorch Kit

Ready to work anywhere, FlickerTorch is a 3/4 by 4 inch flicker generator/dimmer. The 4 watt halogen bulb can put out more than 10,000 footcandles! Random flicker effect is very convincing. This small modular system is powered by 3 x 9 volt batteries to bring a practical torch, lantern, etc. up to a usable tungsten level when you need to see the actor. Flicker effect can be turned off for....

....a steady glow. Several fire "personality" adjustments and a dimmer allow precise control. So small! Place it almost anywhere (a similar device is used in our FlickerLantern Pro). Kit includes electronics assembly, 2 lamps, socket assembly, extension cable and 3x9 volt snap battery harness. \$125

FlickerLantern Classic

These affordable lanterns are useable at a nominal 12 volts AC or DC. They provide realistic firelight to decorate a patio, restaurant, theme park or home. Styles shown below. AC adapter included. \$139

FLICKERLANTERN CLASSIC "GUTS" ALSO AVAILABLE!

FlickerLantern Pro

These DC powered lanterns have a frosted glass envelope with a lamp located where the flame would be for a very convincing effect.

They use the same type flicker generator/dimmer as our Flickertorch with several fire "personality" adjustments. Base conceals permanently mounted flicker unit. 120/240 volt AC adapter included. We can usually fit this system into your prop lantern, inquire! Currently available styles are Hurricane (at left)

and Antique \$399. A kit of "guts" has all parts to install in your own lantern \$265. Or for a nominal charge we'll install it in your lantern!

PRO (DC) FLICKERLANTERN "GUTS" ALSO AVAILABLE!

MicroFlicker & MicroDimmer

Connect in-line with Micro Flo tubes. MicroFlicker is a random flicker generator with several personality adjustments. MicroDimmer has a 4 pin XLR battery input and 4 dimming outputs. \$CALL

Mini Talk & Ring

Battery operated phone ringer works with old and new phones, faxes, etc. Just press button to ring, release to talk. Standard RJ11 phone jacks. Adds realism for the actor. They can talk to someone off camera/stage or another actor. \$149

Cue-Star Wireless Cue Light

NOW WITH NIMH BATTERIES & BRIGHT WHITE LEDS!

Talent can be reliably cued from off set or stage silently. Several cues can be issued to receivers in different areas of the set at the same instant. Transmit through set walls, around corners, up to several hundred feet. The miniature transmitter lights 6 high brightness white LEDs on the receiver and toggles the Interface Output on/off to directly trigger our In-line AC Pro Dimmers. By using an external relay nearly anything can be triggered remotely (tone output & other custom features available). 390 mhz high....

....reliability radio system. A dimmer allows working in close proximity to the active shooting area without spilling light where it is not wanted. Each palm sized transmitter has a unique digital code and each receiver contains a re-codable, channel (via a single push button) allowing several receivers to operate on separate channels or together on a common channel. Transmitter and receiver are battery powered. Kit includes transmitter, receiver with NIMH rechargeable batteries, antenna, AC power adapter/charger for 120/240 volt operation \$525. Fits in a Pelican 1200 hard case.

MULTI-UNIT KITS & MULTI-BUTTON TRANSMITTERS AVAILABLE!

DMX Firelight Generator

A random firelight generator to control DMX dimmers. The DMX input control level is combined with the fire effect and output, at that address, in standard DMX protocol. Can also be used alone. Several firelight "personality" controls provide a wide range of use. \$CALL

6, 12 & 24K DMX Dimmers

Operates also as a stand alone Dimmer (see Pro Dimmer description). The DMX signal addressing the unit works simultaneously with the Interface and local control in a "highest takes precedence" combination. A preheat setting allows faster lamp response for lighting effects and to protect the lamp from inrush current. Smaller than, lighter than, and priced to beat, any Strand of competition. \$1395, \$1790, \$1995

LED TwinkleDot

Add sparkle to actor eyes or product with this randomly "twinkling" dimmable LED light source; 19 hi-output white LEDs in a 1.5" spot.

Architectural Firelight Genny

120 volt AC/20 amp unit with inset user adjustments. Custom voltage, current, & packaging configurations are available. Order with Edison connectors/knobs for demonstration of our firelight technology. \$359

Necessities

CONNECTOR GUARDS: Attaches to our 2K devices and Shadowmaker, old versions too! Prevent ground pin breakage and bent pins during brutal rental use. Instructions included. \$25, \$50
KNOB ADAPTER KIT: Fits older 2K Pro and 2K Quick dimmers. "Kit" consists of a rugged dimming knob and circular plate with graduated pointer references. \$25
OPERATING INFO. LABEL: A durable rear printed ABS plastic label with general operating instructions (and flicker generator effects list). Can be used with older Flicker 2 Digital, Shadowmaker, and Wireless Cue Lights Others available soon. \$1

Flicker 2D 2, 6, 12 & 24K

Compact single channel flicker units with 2,000, 6,000, 12,000 and 24,000 watt output capability. 16 different selectable programs in an integrated circuit memory provide automatic random or regular changing light. High resolution flicker for several level changes, not just an on/off flicker. Low dimmer and high dimmer level knobs allow maximum light control. When the effects are enabled via the on button flicker action takes place between these two dimmer settings for subtle or dramatic effect. Speed control is extremely wide range from nearly stopped to very fast.

NOW AVAILABLE WITH DMX!

Create firelight, candles, TV sets, movie screens, lightning, and other changing light sources. Operates as dimmer only without flicker effect if desired. Interface output DIRECTLY DRIVES OUR IN-LINE AC DIMMERS. Drives several at one time. \$729, \$1499, \$2595, \$2790

2K Flicker Dimmer

This economical effects device features a 2,000 watt load capacity. The no frills control configuration provides a high resolution flicker for several level changes, not just an up down flicker (similar to Flicker 2D, above). Use as dimmer only or set the low dimmer and high dimmer limit controls and switch the effects generator on. Flicker action takes place between these two dimmer settings. Remote input allows unit to be turned on or off. Same general outline as the Flicker 2D. Edison/U-ground AC connectors and standard BLF 20 type fuse. It has no interface output. \$449

Shadowmaker

The ultimate lighting effects controller. Contains 3 completely isolated 2,000 watt dimmer circuits. That's 6,000 watts! It can be used as a cueable dimmer, a silent switch, a flicker, fire, effects generator, or a chase generator! The 3 dimmers are dual level, addressable by the flicker generator, which.....

....allows the selected effect to operate between preset high and preset low light levels (see Flicker 3D). Apparently complex lighting effects become simple yet effective. 16 programs including firelight, candles, TV sets, movie screens, lightning storms, as well as several chaser/tracer variations. *The 3 flicker outputs are INTERACTIVELY RANDOM so that three slightly different lighting angles can be used to create moving shadows as a real fire does.* The wide range speed control affords endless variations. A clock input/output allows motion control or other systems (even other Shadowmakers) to synchronize with the selected effect. Interface output connector for each channel to DIRECTLY DRIVE OUR IN-LINE AC DIMMERS for incredible POWER! \$1350

SYNC INPUT AND OPTIONAL OUTPUT!

2K, 6K, 12K & 24K In-line AC Pro Dimmers

Compact, reliable, and quiet, these units are used by demanding professionals. Smaller, lighter, and more convenient than the bulky, heavy, Variac. Control light without scrims, diffusion, or other tedious methods. *Trim control allows precision calibration. No minimum load necessary for proper operation.* Standard configuration features quiet tactile feedback on/off push-buttons. The parallel Interface Input/output connection can be DIRECTLY DRIVEN by other Magic Gadgets such as Flicker 2 Digital, Shadowmaker, Flicker 3D, and more. Optional Pro + feature adds linear response from a standard 0-10 volt Analog input. A second connector goes to next dimmer in daisy chain configuration. \$395, \$1295, \$1690, \$1895

2K & 3X DMX Quick Dimmer

Compact, reliable, and quiet, these precision dimmers are not only an excellent value but they are much more stable than dimmers of comparable price. Designed especially for use in situations where you need a dimmer in a lighting grid or display without using a dimmer rack or other clunky solution. Set it and forget it! Remove and reapply power and the dimmer goes on to it's last setting. No minimum load necessary for proper operation. Large rocker on-off switches and dimming knobs. Single and Triple channel models have Interface connections to allow use with our various effects generators! The Triple Quick is also available in a DMX model (shown) which allows combined use of DMX AND LOCAL CONTROL. (Photos follow....)

\$355

- 2K QUICK -

\$825

- TRIPLE QUICK WITH DMX -

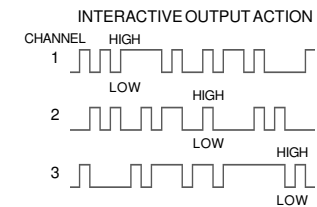

Practical SWX

Switch set lights silently in dead sync with action. Unit will slave a 2,000 watt* load to a single trigger load. Actor turns on/off a bedside lamp or other load, up to 600 watts, to automatically turn on/off the set lights, etc. Reversal switch inverts this effect, i.e. trigger load goes on and main load goes off (also affecting Interface Output to DIRECTLY DRIVE our dimmers). Features load test/manual trigger button, effect reversal toggle switch, output and ground integrity indicators, u-ground connectors for power input, main load, and trigger load. 120 volts ac, 50/60 Hz, BLF 20 amp fuse, size appx. 2x3.5x4". *Maximum load, trigger and output combined. \$CALL

Flicker 3D Controller

Three interactive channels connect to our dimmers via 3 Interface Outputs that DIRECTLY DRIVE OUR IN-LINE AC PRO DIMMERS to MAKE SHADOWS MOVE for very realistic firelight. No lamp outputs. Like a Shadowmaker without the 3-2,000 watt outputs. \$235

DC Dimmer & Flicker DC

Add dimming or boost color temperature when lighting inside moving vehicles with 12 volt RV bulbs, Sun Gun, etc. Control auto headlights to push them within range of film and video exposure. Or just regulate a lower voltage to extend the life of portable electronic equipment. 3 to 28 volt dc input range, 10 amp peak output load limit \$329. Flicker DC includes a flicker generator with controls similar to Flicker Torch \$359.

Shadowmonster

Like a Shadowmaker on steroids! Individual effect select, high & low dimmer set and speed controls for each of the 6 channels. All channels can also be controlled by channel 1's speed control. Set all effects the same for a 12K firelight with 6X2K lamps! Or... Use several 2,000 watt channels for a chase, some for a fire and use some as a dimmer only... ALL AT THE SAME TIME! Uses the same NEW 6X2K housing as the Six Pak Dimmer. A whisper fan keeps the unit cool. \$CALL

Six Pak Dimmer

This precision 6X2,000 watt unit has two configurations: desktop, with wire entry in rear, or hard case (shown) with wire entry on top & cable storage slot. Dimming control for each of the six channels with switchable bus Master. 6 Interface inputs and an "all" input. Whisper fan \$2395. DMX version available. \$2495

OPTIONAL SOCAPEX OUTPUT AVAILABLE!

CHECK OUT THESE NEW F/X GENNYS!

Firelight F/X Generator

An economical yet believable effect for the "short of funds" project. The random effect created by this device can be adjusted for the look of a candle flame or large fire. Adjustment via recessed controls or opt. knobs. 2K max load. \$CALL

Lightning F/X Generator

The realistic lightning effect created by this device can be adjusted for the look of a big scary storm or a single lightning event. Choose random or regular "lightning strikes". Adjust via recessed controls or opt. knobs. 2K max load. \$CALL

Flicker-Flipper Genny

Cycles between low level and high level dimmer settings with time on and time off adjustments. Great for simulating light from signs, emergency vehicles, fires, lightning strikes & other random or regular events. 2K max load. \$CALL
