## SUPERBRIGHT FLASHLIGHT INSERT

**THIS EQUIPMENT IS INTENDED FOR PROFESSIONAL USE ONLY. PLEASE READ THE ACCOMPANYING MATERIAL CAREFULLY BEFORE OPERATING.** Superbright is designed to boost the light level of a practical 2 "D" cell flashlight to that of a 6 "D" cell Krypton flashlight using 8 standard Alkaline "AAA" cells and a Maglight brand 6 "D" cell flange base lamp. This lamp is "matched" to the battery pack and **MUST** be used in conjunction with it. The flange base is the most common type of lamp used and should fit most flashlights. Some flashlights may have to be modified to accept this type of lamp. This device is the only practical way to create those beautiful flashlight beams in atmospheric diffusion without using a big brute of a flashlight or wiring the actor. For best results use only fresh **ALKALINE** batteries. Rechargeable batteries may not work properly so they are not recommended. Insert the unit into the flashlight with the silver plate toward the battery pressure spring. *When using with a metal flashlight it may be necessary to line the battery compartment with an insulating liner such as paper or plastic to prevent the batteries from short circuiting.*

**CAUTION:** this product is capable of outputting in excess of 10,000 candlepower! **Never look into the beam or shine it into the eyes of another person.**

**IMPORTANT:** *It is a good idea to test the unit for compatibility with the flashlight and for required battery time needed in your specific application before it is required.*

USE IN MOST 2 "D" CELL LIGHTS  
WITH 6 "D"  
MAGLIGHT TYPE BULB

INSERT INTO THE FLASHLIGHT  
WITH THE SILVER DISC TOWARD  
THE SPRING
